What Specifications Are Needed for a GPC Inquiry?

For a useful GPC inquiry, buyers should provide fixed carbon, sulfur content, ash, moisture, volatile matter, particle size, quantity, packing, application and destination. These fields help the supplier check available batches, particle-size options and shipment feasibility before quoting.

For a useful GPC inquiry, buyers should provide fixed carbon, sulfur content, ash, moisture, volatile matter, particle size, quantity, packing, application and destination. These fields help the supplier check available batches, particle-size options and shipment feasibility before quoting.

— Procurement Context / 采购延伸

This topic should be converted into product route, specification fields, quantity, packing, destination and use case. Related material: GPC / Graphitized Petroleum Coke. Specification focus: fixed carbon, sulfur, particle size.

— Definition

GPC means Graphitized Petroleum Coke. Semi graphitized petroleum coke and fully graphitized petroleum coke are handled under the GPC product family, with final supply confirmed by batch specifications and buyer requirements.

— GPC Inquiry Specification Table

Inquiry field	What to provide	Why it matters
Fixed carbon	Target value or acceptable range	Helps match the required carbon level and application
Sulfur content	Maximum value or target range	Important for foundry, steelmaking and metallurgy use
Ash, moisture, volatile matter	Target values or test requirements	Used to evaluate impurity level, dry condition and batch consistency
Particle size	For example 1-5 mm, 0-1 mm or another range	Affects feeding, screening loss, packing and available stock
Quantity, packing, destination	Tonnage, jumbo bags or other packing, delivery city or port	Required for a practical quotation and shipment plan

Inquiry Checklist

- Product name: GPC / Graphitized Petroleum Coke
- Application: foundry, steelmaking, metallurgy or other industrial use
- Fixed carbon, sulfur content, ash, moisture and volatile matter requirements
- Particle size, order quantity and packing method
- Destination, expected delivery time and whether sample or batch test data is needed

FAQ

Can I request a quote with only fixed carbon and sulfur content?

Those two fields are useful for the first discussion, but they are not enough for a practical quote. Particle size, quantity, packing and destination are also needed.

Is semi graphitized petroleum coke quoted separately from GPC?

It can be discussed under the GPC product family. Buyers should state the required specification, application and particle size so the supplier can check suitable batches.

Why does particle size matter in a GPC inquiry?

Particle size affects use, screening loss, packing and stock availability. Two inquiries with the same chemical indexes may still differ if the particle-size requirement is different.
